

Unwinder/Rewinder

Model 4

INDUSTRIAL UNWINDER / REWINDER
CUSTOMIZABLE UP TO 5,20 MT
MAX SPEED 30 MT / MIN

Completely customizable autonomous system able to manage rolls up to 5,20 mt. Designed for machines of current and future generation. It can be used on the front or back of cutting, printing or combined systems; max flexibility in the productive configuration; with a single product you have a rewinder or an unwinder according to the dynamic needs of production. A system detecting the tensioner position through optional sensors can control the clockwise and counter clockwise rewinding of the roll installed.

MAIN FEATURES

- length on demand
- width on demand
- height on demand
- automatic speed management through analogic dandy roll
- expanding pneumatic roll holder shaft
- max capacity on demand
- unwinder/rewinder
- easy rolls loading with a forklift
- roll diameter reading laser sensor
- rotation direction selector
- 4 safety sensors on the machine
- motorized with a brushless motor
